Introduction

The Computer Forensics Tool Testing (CFTT) program is a joint project of the National Institute of Justice (NIJ), the research and development organization of the U.S. Department of Justice, and the National Institute of Standards and Technology’s (NIST’s) Office of Law Enforcement Standards (OLES) and Information Technology Laboratory (ITL). The program is supported by other organizations, including the Federal Bureau of Investigation, the U.S. Department of Defense Cyber Crime Center, the U.S. Department of Homeland Security’s Bureau of Immigration and Customs Enforcement, and the U.S. Secret Service. The objective of the CFTT project is to provide measurable assurance for practitioners, researchers, and other users that the tools used in computer forensics investigations provide accurate results. Accomplishing this requires the development of specifications and testing methods for computer forensics tools and the testing of specific tools against those specifications.

Test results provide the information necessary for developers to improve tools, for users to make informed choices, and for the legal community and others to understand the tools’ capabilities. This approach to testing computer forensic tools is based on well-recognized methodologies for conformance and quality testing. The specifications and testing methods are posted on the CFTT Web site (http://www.cftt.nist.gov) for both comment and review by the computer forensics community.

This document reports the results from testing the Royal Canadian Mounted Police Hard-Disk Write Lock V0.7 (RCMP HDL) against the Software Write Block Tool Specification & Test Plan Version 3.0, available from the CFTT Web site. This specification identifies the top-level tool requirements as:

- The tool shall not allow a protected drive to be changed.
- The tool shall not prevent obtaining any information from or about any drive.
- The tool shall not prevent any operations to a drive that is not protected.

Test results from RCMP HDL V0.4, V0.5, and V0.8 are posted on NIJ’s CFTT Web page (http://www.ojp.usdoj.gov/nij/scientech/cftt.htm). Test results from other software packages and the CFTT testing methodology are also posted on this page.
Test Results for Software Write Block Tools

Tool Tested: RCMP HDL V0.7 010610 ©RCMP 1993-2001

Operating System: MS DOS (Windows 98 DOS) Version 4.10.2222

Supplier: Royal Canadian Mounted Police
Technological Crime Branch
Technical Operations Directorate

Address: 1426 St. Joseph Boulevard
Ottawa, ON K1A 0R2

1.0 Results Summary by Requirements

The tool shall not allow a protected drive to be changed.

For some test cases run, the tool did not block all commands that could change protected drives.

The tool shall not prevent obtaining any information from or about any drive.

Except for one command in the information category, the tool always allowed commands to obtain information from the protected drives for all test cases run. The read drive type (0x15) command was always blocked on protected drives.

The tool shall not prevent any operations to a drive that is not protected.

For all test cases run, the tool always allowed any command to access any unprotected drives.

2.0 Anomalies

The tool blocked the commands that were listed in the documentation as commands that would be blocked. However, the tool did not block two commands in the configuration category that could change the content or accessability of a protected drive. The commands not blocked were an EDSI Diagnostic command (0x0E) and the Initialize Drive Parameters command (0x09).

In addition, one command in the control category and one command in the information category that could have been allowed were blocked. The blocked commands were the read drive type (0x15) and the extended seek (0x47) commands.

3.0 Test Case Selection

The test cases were selected from *Software Write Block Tool Specification & Test Plan Version 3.0*. All 40 test cases defined in the specification were applied to HDL V0.7.

4.0 Test Results by Assertion

This section groups test results by assertion. The assertions were taken from *Software Write Block Tool Specification & Test Plan Version 3.0*.

4.1 Mandatory Assertions

**SWB-AM-01.** If a drive is protected and a command from the write category is issued for the protected drive then the tool shall block the command.

Each command in the write category was sent to all protected drives. HDL blocked every command sent from the write category to a protected drive.

**SWB-AM-02.** If a drive is protected and a command from the configuration category is issued for the protected drive then the tool shall block the command.

Each command in the configuration category was sent to all protected drives. The tool did not block two commands in the configuration category that could change the content or accessability of a protected drive. The commands not blocked were an EDSI Diagnostic command (0x0E) and the Initialize Drive Parameters command (0x09).

Test Cases: SWB-03 and SWB-04.

**SWB-AM-03.** If a drive is protected and a command from the miscellaneous category is issued for the protected drive then the tool shall block the command.

Each command in the miscellaneous category was sent to all protected drives. HDL blocked every command sent from the miscellaneous category to a protected drive.

**SWB-AM-04.** If a drive is protected and a command from the read category is issued for the protected drive then the tool shall not block the command.

Each command in the read category was sent to all protected drives. HDL never blocked any command sent from the read category to a protected drive.

**SWB-AM-05.** If a drive is protected and a command from the control category is issued for the protected drive then the tool shall not block the command.
Each command in the control category was sent to all protected drives. HDL always blocked one of the commands sent, but never blocked the other commands in the control category. The blocked command was the extended seek (0x47) command.

Test Cases: SWB-11 and SWB-12.

**SWB-AM-06.** If a drive is protected and a command from the information category is issued for the protected drive then the tool shall not block the command.

Each command in the information category was sent to all protected drives. HDL always blocked one of the commands sent, but never blocked the other commands in the information category. The blocked command was the read drive type (0x15) command.

Test Cases: SWB-09 and SWB-10.

**SWB-AM-07.** If the tool is executed then the tool shall issue a message indicating that the tool is active.

HDL always issued the message **Write Lock successfully installed** to indicate that the tool was active.

**SWB-AM-08.** If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.

HDL always issued the message **N Hard-Disks reported by Int_13h** to indicate that N drives were accessible by the interface.

**SWB-AM-09.** If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.

HDL always issued either the message **Hard-Disk N Locked!** or the message **Hard-Disk N Not Locked!** to indicate the protection status of each covered drive.

**SWB-AM-10.** If the tool is configured to return *success* on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.

If HDL was configured to return *success* on blocked commands, all blocked commands returned *success*.

**SWB-AM-11.** If the tool is configured to return *fail* on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.

If HDL was configured to return *fail* on blocked commands, all blocked commands returned *fail*. 
4.2 Optional Assertions

SWB-AO-01. If a subset of all covered drives is specified for protection, then commands from the write category shall be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the write category was sent to all protected drives, HDL blocked every command sent from the write category to a protected drive.

SWB-AO-02. If a subset of all covered drives is specified for protection, then commands from the configuration category shall be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the configuration category was sent to all protected drives, HDL did not block two commands that could change the content or accessability of a protected drive. The commands not blocked were an EDSI Diagnostic command (0x0E) and the Initialize Drive Parameters command (0x09).

Test Cases: SWB-15 and SWB-16.

SWB-AO-03. If a subset of all covered drives is specified for protection, then commands from the miscellaneous category shall be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the miscellaneous category was sent to all protected drives, HDL blocked every command sent from the miscellaneous category to a protected drive.

SWB-AO-04. If a subset of all covered drives is specified for protection, then commands from the read category shall not be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the read category was sent to all protected drives, HDL never blocked any command sent from the read category to a protected drive.

SWB-AO-05. If a subset of all covered drives is specified for protection, then commands from the control category shall not be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the control category was sent to all protected drives, HDL always blocked one of the commands sent, but never blocked the other commands sent. The blocked command was the extended seek (0x47) command.

SWB-AO-06. If a subset of all covered drives is specified for protection, then commands from the information category shall not be blocked for drives in the selected subset.

When a subset of covered drives was selected and each command in the information category was sent to all protected drives, HDL always blocked one of the commands sent, but never...
blocked the other commands sent. The blocked command was the read drive type (0x15) command.

Test Cases: SWB-21 and SWB-22.

**SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.**

When a subset of covered drives was selected and each command in every category was sent to all unprotected drives, HDL never blocked any command sent to an unprotected drive.

**SWB-AO-08. If the tool is active during the operating system boot and shutdown processes then no changes are made to any protected drives.**

The system was booted with the test harness and HDL was started from the AUTOEXEC.BAT file. Each command in the write category was sent to every protected drive to show that the tool was active. Finally, the system was shutdown. To ensure that nothing was written to the disks after the harness was no longer active, a posttest SHA1 hash value was compared to a pretest SHA1 hash value for each drive used in the test. The SHA1 hash values computed after the test were the same as the values computed before the test, indicating that no changes to the drives occurred during the test.

**SWB-AO-09. If the tool is active and the tool is then deactivated then no commands to any drive shall be blocked.**

With the tool activated, each command in the write category was sent to each protected drive. The tool was then deactivated. When all commands in every category were subsequently sent to each drive, HDL never blocked any of the commands sent.

**SWB-AO-10. If the tool blocks a command then the tool shall issue either an audio or a visual signal.**

This optional feature is not supported by HDL.

### 5.0 Testing Environment

The tests were run in the NIST CFTT lab. This section describes the hardware (test computers and hard drives) available for testing. Not all components were used in testing. The following host computers were used for execution of test cases: HecRamsey, McCloud, McMillan, AndWife, Cadfael, Rumpole, Wimsey, and JudgeDee. Ten hard drives (eight different models, three different brands) were used for the tests (Table 5-3).
5.1 Test Computers

Four host computers (Cadfael, Rumpole, Wimsey, and JudgeDee) have the following hardware components in common:

<table>
<thead>
<tr>
<th>Table 5-1. Extended BIOS Host Computer Hardware Components</th>
</tr>

</tr>
<tr>
<td>Two slots for removable IDE hard disk drives</td>
</tr>
<tr>
<td>Two slots for removable SCSI hard disk drive</td>
</tr>
</tbody>
</table>

The computer Rumpole also had a 30GB OnStream SC30 tape drive (not used in the test procedures). The computer JudgeDee had a third slot for a removable IDE hard disk drive.

The computers HecRamsey, McCloud, McMillan, and AndWife have the following hardware components in common:

<table>
<thead>

</tbody>
</table>

5.2 Hard Disk Drives

The hard disk drives used were selected from the drives listed in Table 5-3. These hard drives were mounted in removable storage modules. Any combination of up to three IDE hard drives and two SCSI hard drives can be installed in HecRamsey, McCloud, McMillan, and AndWife. Any combination of up to two IDE hard drives and two SCSI hard drives can be installed in...
Cadfael, Rumpole, Wimsey, or JudgeDee as required for a test. The IDE disks used had jumpers set for *cable select*. The SCSI ID for the SCSI disks was set to either 0 or 1 as required by the test case.

The hard drives used in testing are described in Table 5-3. The **Label** column shows an external identification for the hard drive. The **Model** column shows the model identification string obtained from the drive. The **Interface** column identifies the type of interface used to connect the drive to the computer. The **Usable Sectors** column documents the size of the drive in sectors. The **GB** column gives the size of the drive in gigabytes.

**Table 5-3. Hard Drives Used in Testing**

</tbody>
</table>

The drives are set up in a variety of ways, with the common partition types (FAT16, FAT32, FAT32X, NTFS, and Linux ext2) represented. The setup of each drive is documented in Table 5-4. The **Drive Label** column shows an external identification for the hard drive. The **Partition Table** column describes the partition table for the drive. In the partition table description, the column labeled N is a sequence number. The unlabeled column identifies a primary partition (P), a primary extended partition (X), a secondary partition within an extended partition (S), or an extended partition within an extended partition (x). The **Start LBA** column identifies the starting logical block address (LBA) of the partition. The **Length** column shows the length of the partition in sectors. The **Boot** column indicates the boot partition. The **Partition Type** column contains the two digit hexadecimal partition type code and name of the partition type for common partition types.

After the drives were created, a SHA1 hash value was computed for the entire drive (Table 5-5). After testing was finished, a SHA1 hash value was computed again (Table 5-6). The lack of change in the SHA1 hash values indicates that no changes were made to the drives during testing.

5.3 Support Software

Support software, Software Write Block Test Harness (SWBT) Release 1.0, was developed to support the testing of interrupt 13h based software write block tools. The program DISKWIPE from the FS-TST Release 1.0 package was used in the drive setup procedure. Both FS-TST Release 1.0 and SWBT Release 1.0 can be obtained from the Web site [http://www.cftt.nist.gov](http://www.cftt.nist.gov). The support software has components to monitor interrupt 13 activity (TALLY13.COM) and to issue each of the 256 possible interrupt 13 commands (TEST-HDL.EXE). The TEST-HDL program was written in ANSI C and compiled with the Borland C++ compiler version 4.5. The TALLY13 program was written in assembler language and compiled with Borland Turbo Assembler version 5.0.

The programs listed in Table 5-7 are required for testing.

Table 5-7. Software Required for Testing

<table>

</tr>
</tbody>
</table>

5.4 Run Protocol Selection

Most test cases follow the same test procedures. However, some test cases require a special procedure.

Set up a selection of hard drives for use in testing as follows:

1. Select a hard drive.
2. Use the FS-TST diskwipe program to initialize the drive.
3. Create and format partitions on the drive (optional step).
4. Compute a reference SHA1 hash of the drive.

The general procedure for executing a test case is as follows:

1. Select a test case to execute.
2. Install the number of hard drives called for by the test case.
3. Boot the test computer into DOS.
4. Follow the run protocol for the selected test case.
5. Save test case results to an archive location.

The run protocol specifies the actual procedures to follow for the test case. Some test cases require different setup procedures and methods to measure results. The values for test parameters such as return type, command category, N drives, and protection pattern can be found in Software Write Block Tool Specification & Test Plan Version 3.0. The following protocols are defined:

- Typical
  1. Execute the interrupt 0x13 monitor (TALLY13).
  2. Execute the SWB tool under test with the specified return type.
  3. Execute TEST-HDL for the specified command category.

- Uninstall
  1. Execute the interrupt 0x13 monitor (TALLY13).
  2. Execute the SWB tool under test with the specified return type.
  3. Execute TEST-HDL for the write command category.
  5. Uninstall the SWB tool.
  6. Execute TEST-HDL for each command category.

- Boot
  1. Install the SWB tool. (For DOS systems, include the tool and monitor in the AUTOEXEC.BAT file.)
  2. Boot the system.
  3. Execute TEST-HDL for the write command category.
  4. Shut down the system.

The typical protocol applies to cases 01-36, the boot protocol applies to test cases 37 and 38, and the uninstall protocol applies to cases 39 and 40.

6.0 Interpretation of Test Results

The main item of interest when interpreting the test results is the tool’s conformance to the test assertions. This section lists each test assertion and identifies the information in the log files relevant to conformance with the assertion. Conformance of each assertion tested by a given test case is evaluated by examination of the Commands Executed and the Log File Highlights boxes of the test report summary.

6.1 Test Assertion Verification

This section describes where to find the information needed to verify each test assertion in the test case report.
SWB-AM-01. If a drive is protected and a command from the write category is issued for
the protected drive then the tool shall block the command.

The protected drives are identified on the HDL command line in the Commands Executed box.
The Test Harness Log lists each command sent to each drive. If the action column contains
Blocked for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-02. If a drive is protected and a command from the configuration category is
issued for the protected drive then the tool shall block the command.

The protected drives are identified on the HDL command line in the Commands Executed box.
The Test Harness Log lists each command sent to each drive. If the action column contains
Blocked for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-03. If a drive is protected and a command from the miscellaneous category is
issued for the protected drive then the tool shall block the command.

The protected drives are identified on the HDL command line in the Commands Executed box.
The Test Harness Log lists each command sent to each drive. If the action column contains
Blocked for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-04. If a drive is protected and a command from the read category is issued for
the protected drive then the tool shall not block the command.

The protected drives are identified on the HDL command line in the Commands Executed box.
The Test Harness Log lists each command sent to each drive. If the action column contains
Allowed for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-05. If a drive is protected and a command from the control category is issued for
the protected drive then the tool shall not block the command.

The protected drives are identified on the HDL command line in the Commands Executed box.
The Test Harness Log lists each command sent to each drive. If the action column contains
Allowed for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-06. If a drive is protected and a command from the information category is
issued for the protected drive then the tool shall not block the command.

The protected drives are identified on the HDL command line in the Commands Executed box.
The Test Harness Log lists each command sent to each drive. If the action column contains
Allowed for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the
tool is active.

If the Install HDL Log contains the text Write Lock successfully installed, the
test case conforms to the test assertion.
SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.

HDL always issued the message **N Hard-Disks reported by Int_13h** to indicate that **N** drives were accessible by the interface. If **N** is the same as the number of drives specified on the TEST-HDL command line in the Commands Executed box, the test case is in conformance with the test assertion.

SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.

HDL always issued either the message **Hard-Disk N Locked!** or the message **Hard-Disk N Not Locked!** to indicate the protection status of each covered drive. If drive **N** is listed on the command line to HDL and the Install HDL log reports drive **N** as locked, then the test case is in conformance with the test assertion.

SWB-AM-10. If the tool is configured to return *success* on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.

HDL was configured to return *success* on blocked commands if an **S** flag was used on the HDL command line. The return value of blocked commands is *success* if in the Test Harness Log the value of the stat column is **0000** and the value of the Cry column is *Off*.

SWB-AM-11. If the tool is configured to return *fail* on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.

HDL was configured to return *fail* on blocked commands if no **S** flag was used on the HDL command line. The return value of blocked commands is *fails* if in the Test Harness Log the value of the stat column is **0300** and the value of the Cry column is *On*.

SWB-AO-01. If a subset of all covered drives is specified for protection, then commands from the write category shall be blocked for drives in the selected subset.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains *Blocked* for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AO-02. If a subset of all covered drives is specified for protection, then commands from the configuration category shall be blocked for drives in the selected subset.

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains *Blocked* for each command sent to a protected drive, the test case conforms to the assertion.

SWB-AO-03. If a subset of all covered drives is specified for protection, then commands from the miscellaneous category shall be blocked for drives in the selected subset.
The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains *Blocked* for each command sent to a protected drive, the test case conforms to the assertion.

**SWB-AO-04. If a subset of all covered drives is specified for protection, then commands from the read category shall not be blocked for drives in the selected subset.**

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains *Allowed* for each command sent to a protected drive, the test case conforms to the assertion.

**SWB-AO-05. If a subset of all covered drives is specified for protection, then commands from the control category shall not be blocked for drives in the selected subset.**

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains *Allowed* for each command sent to a protected drive, the test case conforms to the assertion.

**SWB-AO-06. If a subset of all covered drives is specified for protection, then commands from the information category shall not be blocked for drives in the selected subset.**

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains *Allowed* for each command sent to a protected drive, the test case conforms to the assertion.

**SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.**

The protected drives are identified on the HDL command line in the Commands Executed box. The unprotected drives are the drives not listed on the HDL command line. The Test Harness Log lists each command sent to each drive. If the action column contains *Allowed* for each command sent to a unprotected drive, the test case conforms to the assertion.

**SWB-AO-08. If the tool is active during the operating system boot and shutdown processes then no changes are made to any protected drives.**

The protected drives are identified on the HDL command line in the Commands Executed box. The Test Harness Log lists each command sent to each drive. If the action column contains *Blocked* for each command sent to a protected drive, the test case conforms to the assertion.

**SWB-AO-09. If the tool is active and the tool is then deactivated then no commands to any drive shall be blocked.**

This assertion requires a special test protocol. First the tool is activated and some write commands are blocked. Then the tool is deactivated and each command is sent. There are two log files for the tool and two log files for the test harness. The tool is allowed to refuse to deactivate. The tool refuses to deactivate if it has been configured to return *success* for blocked commands because deactivation might allow a buffered write to take place. If the tool is in
compliance with the assertion and is successfully deactivated, then all commands are allowed to all drives. If the tool does not deactivate, then no change occurs to the protection status of the drives.

A warning message appears in the second instance of the Test Harness Log file. This is normal for test cases SWB-39 and SWB-40. The warning message notes that write commands were allowed to unprotected drives while the tool was active during the first part of the test, before the tool was deactivated.

**SWB-AO-10. If the tool blocks a command then the tool shall issue either an audio or a visual signal.**

This optional feature is not supported by HDL.

**6.2 Test Results Summary Key**

A summary of the actual test results is presented in this report. The following table presents a description of each section of the test report summary.

<table>
<thead>
<tr>
<th><strong>Table 6-1. Description of Test Report Summary</strong></th>
</tr>
</thead>

<tr>
<td>date that the TALLY13 program was executed.</td>
</tr>
</tbody>
</table>
| The Test Harness Log is the record of commands sent to HDL and the action taken by HDL either to block or to allow each command sent. The format of the file is as follows:  

1. Command line. The command line used to execute TEST-HDL. This line begins with the string CMD.  
2. Case number.  
3. Interrupt 0x13 Functions. The category of interrupt 0x13 functions tested by this case.  
4. Date.  
5. Version. Version information about TEST-HDL and components. The creation date, creation time, and version of each source code component are listed. The compile time and date for the executable program are listed.  
6. Operator. The operator running the test.  
7. Host. The host computer running the test.  
8. Drives. The number of drives and the external drive label for each drive. The next two items are repeated for each installed drive.  
9. List of commands sent. Each line of the list has 9 columns: sequence number, test case number, command code in hex (Cmd), drive number in hex (Drv), action taken by HDL (either Blocked or Allowed), return status (0000 means success, 0300 means fail), carry flag value (labeled Cry with values of either On indicating failure status, or Off indicating success status), count of the number of times the command was allowed by HDL, and the command name (or undefined for commands in the miscellaneous category).  
10. Summary of commands for the drive. The message indicates the number of commands blocked out of the number of commands sent.  
11. The last item is a summary of all the commands sent to all drives, the number of commands sent, the number blocked, and the number allowed (not blocked). |

| Results: | Expected and actual results for each assertion tested. |
| Analysis: | Whether or not the expected results were achieved. |
### Test Results Summaries

**Case SWB-01 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001**

**Case summary:** SWB-01 install all drives, configure return code to failure, protect all drives, execute write commands.

**Assertions Tested:**
- **SWB-AM-01:** If a drive is protected and a command from the write category is issued for the protected drive then the tool shall block the command.
- **SWB-AM-07:** If the tool is executed then the tool shall issue a message indicating that the tool is active.
- **SWB-AM-08:** If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- **SWB-AM-09:** If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- **SWB-AM-11:** If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.

**Tester Name:** SN

**Test Date:** Thu Oct 02 15:22:09 2003

**Test PC:** McCloud

**Test Software:** SWBT 1.0

**Hard Drives Used:**

Analysis: SWB-07 Expected results achieved

Case SWB-08 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary: SWB-08 Install two drives, configure return code to success, protect all drives, execute read commands.

Assertions Tested:

| SWB-AM-04       | If a drive is protected and a command from the read category is issued for the protected drive then the tool shall not block the command. |
| SWB-AM-07       | If the tool is executed then the tool shall issue a message indicating that the tool is active. |
| SWB-AM-08       | If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces. |
| SWB-AM-09       | If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface. |
| SWB-AM-10       | If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution. |

Analysis: SWB-10 Expected results not achieved for assertions: AM-06

Case SWB-11 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary: SWB-11 Install two drives, configure return code to failure, protect all drives, execute control commands.

Assertions Tested:
SWB-AM-05. If a drive is protected and a command from the control category is issued for the protected drive then the tool shall not block the command.
SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
SWB-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.

Analysis: SWB-11 Expected results not achieved for assertions: AM-05

Case SWB-12 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary: SWB-12 Install one drive, configure return code to success, protect all drives, execute control commands.

Assertions Tested:

SWB-AM-05. If a drive is protected and a command from the control category is issued for the protected drive then the tool shall not block the command.
SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
SWB-AM-10. If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.

### Case SWB-16 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

**Case Summary:** SWB-16 Install all drives, configure return code to success, protect with pattern mid, execute configuration commands.

**Assertions Tested:**

- **SWB-AM-07:** If the tool is executed then the tool shall issue a message indicating that the tool is active.
- **SWB-AM-08:** If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- **SWB-AM-09:** If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- **SWB-AM-10:** If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.
- **SWB-AO-02:** If a subset of all covered drives is specified for protection, then commands from the configuration category shall be blocked for drives in the selected subset.
- **SWB-AO-07:** If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

**Tester Name:** SN

**Test Date:** Thu Oct 02 15:43:51 2003

**Test PC:** McCloud

**Test Software:** SWBT 1.0

**Hard Drives Used:**

- Drive 80, label 6F is a Maxtor 6Y060L0 with 120103200 sectors
- Drive 81, label 8A is a WDC WD200EB-00CSF0 with 39102336 sectors
- Drive 82, label 90 is a WDC WD300BB-00CAA0 with 58633344 sectors
- Drive 83, label 1F is a Quantum ATLAS10K3_18_SCA Drive with 35916548 sectors
- Drive 84, label 2B is a Quantum QM39100TD-SCA Drive with 17783249 sectors

**Commands:** Boot Test PC to (DOS 7.1) Windows 98 [Version 4.10.2222]

Case SWB-17 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary:
SWB-17 Install all drives, configure return code to failure, protect with pattern random p, execute miscellaneous commands.

Assertions Tested:
SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
SWB-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.
SWB-AO-03. If a subset of all covered drives is specified for protection, then commands from the miscellaneous category shall be blocked for drives in the selected subset.
SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Analysis: SWB-18 Expected results achieved

Case SWB-19 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary: SWB-19 Install all drives, configure return code to failure, protect with pattern last, execute read commands.

Assertions Tested:

- **SWB-AM-07**: If the tool is executed then the tool shall issue a message indicating that the tool is active.
- **SWB-AM-08**: If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- **SWB-AM-09**: If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- **SWB-AM-11**: If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.
- **SWB-AO-04**: If a subset of all covered drives is specified for protection, then no commands from the read category shall not be blocked for drives in the selected subset.
- **SWB-AO-07**: If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Analysis: SWB-21 Expected results not achieved for assertions: AO-06

Case SWB-22 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary: SWB-22 Install all drives, configure return code to success, protect with pattern not_first, execute information commands.

Assertions Tested: SWB-AM-07, If the tool is executed then the tool shall issue a message indicating that the tool is active.
SWB-AM-08, If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
SWB-AM-09, If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
SWB-AM-10, If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.
SWB-AO-06, If a subset of all covered drives is specified for protection,
### Case SWB-22 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

then commands from the information category shall not be blocked for drives in the selected subset.

SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Analysis: SWB-22 Expected results not achieved for assertions: AO-06

Case SWB-23 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary: SWB-23 Install all drives, configure return code to failure, protect with pattern random_u, execute control commands.

Assertions Tested:

- SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
- SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- SWB-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.
- SWB-AO-05. If a subset of all covered drives is specified for protection, then commands from the control category shall not be blocked for drives in the selected subset.
- SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Analysis: SWB-25 Expected results achieved

Case SWB-26 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary: SWB-26 Install three drives, configure return code to success, protect with pattern UPU, execute write commands.

Assertions Tested:
- SWB-AM-07. If the tool is executed then the tool shall issue a message indicating the tool is active.
- SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.

August 2004 55 of 80 Test Results for HDL V0.7
**Case SWB-26 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001**

SWB-AM-10. If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.

SWB-AO-01. If a subset of all covered drives is specified for protection, then commands from the write category shall be blocked for drives in the selected subset.

SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

### Case SWB-30 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary:

SWB-30 Install three drives, configure return code to success, protect with pattern PPU, execute write commands.

### Assertions Tested:

- **SWB-AM-07.** If the tool is executed then the tool shall issue a message indicating that the tool is active.
- **SWB-AM-08.** If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- **SWB-AM-09.** If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- **SWB-AM-10.** If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.
- **SWB-AO-01.** If a subset of all covered drives is specified for protection, then commands from the write category shall be blocked for drives in the selected subset.
- **SWB-AO-07.** If a subset of all covered drives is specified for protection,
then no commands from any category shall be blocked for drives not in
the selected subset.

Analysis:

Case SWB-34 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary: SWB-34 Install three drives, configure return code to success, protect with pattern UPP, execute read commands.

Assertions Tested:

SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
SWB-AM-10. If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.
SWB-AO-04. If a subset of all covered drives is specified for protection, then commands from the read category shall not be blocked for drives in the selected subset.
SWB-AO-07. If a subset of all covered drives is specified for protection, then no commands from any category shall be blocked for drives not in the selected subset.

Tester Name: SN
Test Date: Thu Oct 02 13:27:15 2003
Test PC: McMillian

Analysis: SWB-38 Expected results achieved

Case SWB-39 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary: SWB-39 Install all drives, configure return code to failure, protect with pattern high, execute write commands, uninstall, execute all commands.

Assertions Tested:
- SWB-AM-07. If the tool is executed then the tool shall issue a message indicating that the tool is active.
- SWB-AM-08. If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- SWB-AM-09. If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- SWB-AM-11. If the tool is configured to return fail on blocked commands and the tool blocks a command then the return code shall indicate unsuccessful command execution.
- SWB-AO-09. If the tool is active and the tool is then uninstalled then no commands to any drive shall be blocked.

Tester Name: SN
Test Date: Thu Oct 02 16:18:10 2003
Test PC: McCloud
Test Software: SWBT 1.0
Hard Drives Used:
- Drive 80, label 6F is a Maxtor 6Y060L0 with 120103200 sectors
- Drive 81, label 8A is a WDC WD200EB-00C6F0 with 39102336 sectors
- Drive 82, label 90 is a WDC WD300BB-00CAA0 with 58633344 sectors
- Drive 83, label 1F is a Quantum ATLAS10K3_18_SCA Drive with 35916548 sectors
- Drive 84, label 2B is a Quantum QM39100TD-SCA Drive with 17783249 sectors

Commands executed:
- Boot Test PC
- Windows 98 [Version 4.10.2222]

Analysis: SWB-39 Expected results achieved

Case SWB-40 HDL -- Int_13 Hard Disk Write Lock V0.7 010610 (c)RCMP 1993-2001

Case summary: SWB-40 Install all drives, configure return code to success, protect with pattern low, execute write commands, uninstall, execute all commands.

Assertions Tested:

- SWB-AM-07: If the tool is executed then the tool shall issue a message indicating that the tool is active.
- SWB-AM-08: If the tool is executed then the tool shall issue a message indicating all drives accessible by the covered interfaces.
- SWB-AM-09: If the tool is executed then the tool shall issue a message indicating the protection status of each drive attached to a covered interface.
- SWB-AM-10: If the tool is configured to return success on blocked commands and the tool blocks a command then the return code shall indicate successful command execution.
- SWB-AO-09: If the tool is active and the tool is then uninstalled then no commands to any drive shall be blocked.

Tester Name: JRL
Test Date: Fri Oct 03 09:32:16 2003
Test PC: Cadfael
Test Software: SWBT 1.0

Hard Drives Used:
- Drive 80, label 6F is a Maxtor 6Y060L0 with 120103200 sectors
- Drive 81, label 8A is a WDC WD200EB-00CSF0 with 39102336 sectors
- Drive 82, label 1F is a Quantum ATLAS10K3_18_SCA Drive with 35916548 sectors
- Drive 83, label 2B is a Quantum QM39100TD-SCA Drive with 17783249 sectors

Commands executed:
- Boot Test PC
- Windows 98 [Version 4.10.2222]

Analysis: SWB-40 Expected results achieved
About the National Institute of Justice

NIJ is the research, development, and evaluation agency of the U.S. Department of Justice. The Institute provides objective, independent, evidence-based knowledge and tools to enhance the administration of justice and public safety. NIJ's principal authorities are derived from the Omnibus Crime Control and Safe Streets Act of 1968, as amended (see 42 U.S.C. §§ 3721–3723).

The NIJ Director is appointed by the President and confirmed by the Senate. The Director establishes the Institute's objectives, guided by the priorities of the Office of Justice Programs, the U.S. Department of Justice, and the needs of the field. The Institute actively solicits the views of criminal justice and other professionals and researchers to inform its search for the knowledge and tools to guide policy and practice.

Strategic Goals

NIJ has seven strategic goals grouped into three categories:

Creating relevant knowledge and tools

1. Partner with State and local practitioners and policymakers to identify social science research and technology needs.
2. Create scientific, relevant, and reliable knowledge—with a particular emphasis on terrorism, violent crime, drugs and crime, cost-effectiveness, and community-based efforts—to enhance the administration of justice and public safety.
3. Develop affordable and effective tools and technologies to enhance the administration of justice and public safety.

Dissemination

4. Disseminate relevant knowledge and information to practitioners and policymakers in an understandable, timely, and concise manner.
5. Act as an honest broker to identify the information, tools, and technologies that respond to the needs of stakeholders.

Agency management

6. Practice fairness and openness in the research and development process.
7. Ensure professionalism, excellence, accountability, cost-effectiveness, and integrity in the management and conduct of NIJ activities and programs.

Program Areas

In addressing these strategic challenges, the Institute is involved in the following program areas: crime control and prevention, including policing; drugs and crime; justice systems and offender behavior, including corrections; violence and victimization; communications and information technologies; critical incident response; investigative and forensic sciences, including DNA; less-than-lethal technologies; officer protection; education and training technologies; testing and standards; technology assistance to law enforcement and corrections agencies; field testing of promising programs; and international crime control.

In addition to sponsoring research and development and technology assistance, NIJ evaluates programs, policies, and technologies. NIJ communicates its research and evaluation findings through conferences and print and electronic media.
