## 11. TOXICOLOGICAL INFORMATION

---

**Route of Exposure:**  Inhalation  Skin  Ingestion

**Symptoms Related to the Physical, Chemical and Toxicological Characteristics:** Burning pain and severe skin corrosion, eye, lung, and blood damage, and cancer.

**Potential Health Effects (Acute, Chronic and Delayed):**

**Inhalation:** Inhalation of nitric acid can damage the mucous membranes and upper respiratory tract. Short term exposure may cause irritation and inflammation of the upper respiratory tract, coughing, choking, sore throat, shortness of breath, headache, dizziness, and nausea. Long term exposure to acid fumes may cause damage to teeth, bronchial irritation, chronic cough, bronchial pneumonia, and gastrointestinal disturbances. Inhalation of silver nitrate may cause irritation, chronic inhalation may result argyria which may first be recognized by a slate-gray, blue to black discoloration in the conjunctiva and skin starting with the face and spreading to most uncovered parts of the body, including the fingernails which may become a deep chocolate brown color.

**Skin Contact:** Nitric acid can cause severe skin burns. Severity of the damage depends on the concentration and duration of exposure. Effects of acid burns may be delayed. Silver compounds may cause irritation, pain and ulceration, prolonged exposure may cause argyria.

**Eye Contact:** Nitric acid compounds can cause severe eye irritation, corneal burns, permanent eye damage, or blindness. Severity of the damage depends on the concentration and duration of exposure. Exposure to dust or solutions of silver nitrate may cause severe irritation and burns; permanent corneal opacification, loss of epithelium and blindness may result; chronic exposure may cause conjunctivitis or symptoms similar to those in acute exposure.

**Ingestion:** Ingestion of this material is unlikely under normal conditions of use. If ingested, nitric acid can cause severe burns and damage to the gastrointestinal tract. Ingestion of silver nitrate may cause pain and burning in the mouth, throat and epigastrium, salivation, violent abdominal pain and rigidity, black vomitus, diarrhea, anuria, collapse, shock, vertigo, convulsions, coma and death. Repeated ingestion may cause argyria. Signs and symptoms may occur as described in chronic inhalation, as well as anemia, nephritis, and possibly methemoglobinemia.
