

108.2 - Metal Constituents in Fossil Fuels (liquid forms)

These materials are intended for analysis of metal trace elements in fuel oil and reference fuels. [Also see Category 114.] SRM 1634c is a "No. 6" fuel oil in terms of viscosity but has a flash point of 43 °C.

PLEASE NOTE: The tables are presented to facilitate comparisons among a family of materials to help customers select the best SRM for their needs. For specific values and uncertainties, the certificate is the only official source.
